Professional Summary

Software Engineering graduate (pending degree completion) focused on Backend Development, Data Engineering and AI-driven Automation. Experience building a real-time CO2 monitoring platform integrating IoT devices, MQTT communication, secure REST APIs, relational databases, authentication, authorization and cloud deployment.

Technical Skills

Languages: Python, JavaScript, SQL, C#

Backend: FastAPI, Django, Express.js, ASP.NET

Databases: PostgreSQL, MySQL, Supabase

APIs & Security: REST APIs, JWT, Argon2, Access Control

Data Engineering: Data Modeling, ETL Concepts, Data Processing, SQL Analytics

IoT & Messaging: MQTT, HiveMQ, Arduino IDE

DevOps & Cloud: Docker, Git, GitHub, Render, Vercel

AI & Automation: Workflow Automation, API Integrations, LLM Applications

Featured Project

Real-Time CO2 Monitoring Platform (Degree Project)

- Developed backend services for sensor data ingestion, validation and persistence.
- Designed and implemented secure REST APIs.
- Integrated MQTT communication between IoT devices and backend services.
- Implemented JWT authentication and Argon2 password hashing.
- Developed authorization mechanisms and protected endpoint access.
- Designed PostgreSQL database structures for telemetry storage and historical analysis.
- Enabled remote monitoring through cloud-hosted services.

Technologies: Python, FastAPI, PostgreSQL, MQTT, HiveMQ, JWT, Argon2, Docker, Git

Education

Software Engineering

Universidad Cooperativa de Colombia

2022 - 2026

Academic requirements completed; pending degree issuance.

Languages

Spanish: Native

English: B1
